According to Gartner, global spending on IT security is on the rise and will continue to increase significantly right through 2016.

Persistent's Security Offerings

In today's enterprise architectures, complex business applications need to be integrated with multiple systems, such as extended supply chain, third party systems, and outsourced processes. Unfortunately these integrations also enable cyber attackers to have illegitimate access to sensitive information.

Last year alone, cyber-attacks contributed to security breaches in 93% of large and 76% of small organizations, making it extremely critical to assess and address all facets of IT security. Ignoring these threats can lead, amongst others to loss of business, brand's reputation customers' trust, and possibly legal actions. Therefore, implementation of a well-rounded solution including stricter regulatory compliances, system security and safeguarding sensitive data is of prime importance.

The Security Practice Group (SPG) at Persistent Systems provides preemptive end-to-end security strategy consulting, business system assessment, technology recommendations, and remediation, to help our customers stay ahead of security threats. With comprehensive security enablers, we help transform and grow secured businesses across the next generation technologies-Cloud, Mobility, Analytics, and Social.

Offerings Portfolio

- Focus Areas:
  - Cloud
  - Mobility
  - Analytics
  - Social/Collab

- Our Assessment Process:
  - ASSESS Risk Level
  - CONTROL Risks
  - PROTECT Information & Assets
  - MONITOR Environment
  - DEFEND Against Threats

- Verticals:
  - Healthcare & Life sciences
  - BFSI
  - Telecom
