

10 Ways to Data in 2020

1

Is your data warehouse proving to be a cost center?

Turn it into a revenue center with Snowflake Private Data Exchange.

2

Ever wondered if time travel is possible?

Well, the answer is yes! Data snapshots in Snowflake hold the secret key to the past.

3

ThoughtSpot

It's not what you know about your data that matters, it's what you don't. Uncover hidden insights with SpotIQ.

4

Query all data with infinite scalability. Search all data with infinite simplicity.

5

ThoughtSpot

Move over self-service BI, conversational BI is here.

6

Sit back and cruise through ML model creation on autopilot.

AutoML is here to make your workdays a lot simpler.

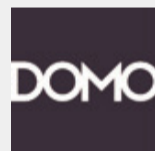

7

Break free of the "Code, Compile, Run" cycle to view your ETL output.

Get live feedback and live data preview with Matillion ELT.

8

Enjoy a single, unified view of the data in your existing Snowflake data warehouse with Domo.

Query billions of rows of data with sub-second response times through Domo's federated data access.

9

Get priority seating for NFRs such as security, scalability, performance, privacy, and reliability within your data platform.

10

A data platform is so much more than disparate tools stitched together.

It's a delicately woven mosaic of composable tools, NFRs, SOPs, and proven processes.

Get your first data-driven use case in 2 weeks with a pre-integrated data technology stack.
