Cloud Migration Utility

Cloud Migration Utility delivers secure, reliable, and efficient migration to cloud, hyper-converged infrastructure, and other transformative data center architectures. Now organizations can securely and quickly move all applications, operating systems, containers, licenses, IP addresses, data, etc. from any physical or virtual platform to any target platform, whether local or remote with the least operational disruption. Migrating between environments was never this easy.

Use Cases

- 1\ Migration over a public network
- 2\ Migration over secure VPN
- 3\ Data seeding using Cloud Migration Utility & Cloud Disaster Recovery and incremental over the wire for large scale migration

Why Cloud Migration Utility?

Platform agnostic solution

Simple and scalable three-step workflow

Migrate legacy physical servers to new infrastructure

Patented technologies for storage, network and cloud infrastructure and data management

Our experience in working with the Cloud Migration Utility team was an awesome one. Their support team was exceptionally good at hand holding and getting the setup completed. The migration went according to plan without any disruptions. We intend to use them again for future projects.

Lead Cloud Architect, Searce

Technical Overview

Cloud Migration Utility captures application consistent images from any physical or virtual server. These point-in-time images are then deduplicated, compressed, encrypted, and replicated to the target, be it a local or remote site or cloud.

A state-of-the-art UI provides visibility of operations across the source and target environments. The user follows a simple 3 step workflow and the entire process is automated making it very intuitive to use.

Cloud Migration Utility includes a migration planner to create an end-to-end plan to identify the machines and automate the entire migration within the relevant timeline. Run any pre- and post-migration scripts

to manage interrelationships between applications and the environment. Migration plans can be tested locally or remotely to ensure confidence, reliability, and speed of migration.

Automatic WAN throttling enables efficient, unmonitored migration during busy and light hours. Customer supplied encryption keys, AES 256 encryption and end-to-end data integrity check provides complete data privacy and security.

Unlock your applications with the solution and automatically transform applications to migrate from any source to any target local or remote site or cloud.

Migrated 130 servers in mixed flavors from private cloud to Google Cloud.

- \\ Increase in performance for migrated workloads
- \\ Completed one week ahead of schedule

Migrated 70+ legacy Linux based VMs from local data center to Google Cloud.

- \\ Virtually no impact on customer's operations
- \\ Increase in performance for the migrated workloads

Migrated 700 servers comprising of 100TB of data with zero business impact from current distributed data center to Nutanix AHV.

- \\ Greatly reduced license fees resulting in dramatic cost-savings
- \\ Dramatic reduction of impact on staff productivity

66

The Cloud Migration Utility team was able to replicate the data without impacting production servers and then provide a quick cutover so that RDA customers were able to continue using the ERP software. The Solution support team was exceptionally good at ensuring we had a solid plan and that everything was configured properly.

Cloud Solutions Architect, Redapt Inc

Fast

- \ Migrate 100s to 1000s of VMs
- \ Globally deduplicated and compressed data migration
- \ WAN optimized

Secure

- \ Military grade AES-256 encryption of data in flight and at rest
- \ Single secure connection between source and target

Reliable

- \ End to end data integrity verification
- \ Robust error recovery

Automated

- \ Automatic transformation between platforms
- \ Pre- and post-processing automation
- \ Migration Plans for automated execution
- \ Automatic setup of predefined VMs, IP changes and security groups applied

About Persistent

With over 15,000 employees around the world, Persistent Systems (BSE & NSE: PERSISTENT) is a global services and solutions company delivering Digital Engineering and Enterprise Modernization. Our next-level capabilities and solutions that support continuous innovation help enterprises boost efficiency, resiliency, and agility with a solid core IT modernization strategy.
