

OFFERING 05 / 06

Data Access Governance

Know who — and what — can reach your most sensitive data across SaaS, collaboration and cloud warehouses.

THE CHALLENGE

Sensitive data now lives in collaboration tools, file shares and cloud data warehouses, not just in applications. Access is granted ad hoc, rarely reviewed and invisible to identity governance — leaving privacy, regulatory and AI-training exposure that no one can quantify.

YOU NEED THIS IF

- › Sensitive data spreading across Confluence, BigQuery, Redshift and file shares
- › Microsoft Purview or BigID classification already in place or being rolled out
- › Privacy or regulatory audits ask who can access sensitive data

THE JOINT SOLUTION

Persistent connects SailPoint Data Access Security to the client's data estate and classification tools, maps who and what can reach sensitive data, and brings data owners into certification campaigns — so data risk is governed through the same identity processes as application access.

SailPoint brings

- SailPoint Data Access Security
- Classification integrations with Microsoft Purview and BigID
- Connectors for Atlassian Confluence, Google BigQuery and AWS Redshift
- Data-owner certifications within Human Fabric

Persistent brings

- Sensitive-data discovery and access-risk assessment
- Data source onboarding and classification integration
- Data-owner model and review design
- Data engineering and governance expertise
- Remediation of excessive data access

HOW IT WORKS

1 Classify

Identify sensitive data using existing classification tools.

2 Map

Connect data sources and map effective access to sensitive data.

3 Review

Bring data owners into risk-based access reviews.

4 Remediate

Remove excessive access and monitor continuously.

BUSINESS OUTCOMES

- ✓ Clear visibility of who can reach sensitive data
- ✓ Reduced data-exposure and privacy risk
- ✓ Evidence for privacy and regulatory audits
- ✓ Safer data foundations for AI initiatives

IDEAL FOR

Organizations subject to privacy regulations

Enterprises with large SaaS and cloud data estates

Companies preparing data for AI and analytics

Start with an Identity Posture Assessment
